Japan — <https://www.e-stat.go.jp/>

Notes : (1) Ratio of no. of openings to no. of applicants = newly registered job openings / newly registered job applicants.
Series of Japan are calculated: effective job openings / effective job applicants (effective data are calculated based on the valid period of 2 months).

(2) Rate of applicants placed = (Job seekers employed by placement program / newly registered job applicants) *100.

(3) Rate of openings filled = (Job seekers employed by placement program / newly registered job applicants) *100.
