2023

Remark : (5)Japan: From 2016, the rate refers to the number of workplace fatalities per thousand persons employed, including cases of occupational disease. The data refer to establishments with at least 100 employees in May each year, excluding public administration. From 2000, the rate refers to end of the year.

(6)Korea, R. O.: The rate refers to the number of workplace fatalities per thousand persons insured, deaths occurring within 1 year.

(7)Singapore: The rate refers to the number of workplace fatalities per thousand persons employed and self-employed, including cases of work-related traffic injury.

(8)United Kingdom: 1995-2006: The rate refers to the number of workplace fatalities per thousand persons employed. From 2009, ILO calculations based on Eurostat data.

(9)United States: The rate represents the number of fatal occupational injuries for 1,000 full-time equivalent workers and was calculated as (the number of fatal work injuries ÷ total hours worked by all employees during the calendar year)×2,000,000, where 2,000,000 is the base for 1,000 equivalent full-time workers (working 40 hours per week, 50 weeks per year). Prior to 2005, the rate was calculated as (the number of fatal work injuries ÷ total employees) ×1,000.
